

# Marketplace Technical Foundation

## [FOODTUCK Q COMMERCE]

### 1. Technical Requirements Defined:

- *Frontend: User-friendly interfaces, responsive design, and essential pages like Product Listing, Cart, and Checkout.*
- *Backend: Use of Sanity CMS for managing data and third-party APIs for payment gateways and shipment tracking.*

### 2. System Architecture Designed:

- *High-level architecture: Interaction between frontend (Next.js), Sanity CMS, and APIs.*
- *Example workflows: User registration, product browsing, order placement, and shipment tracking.*

### 3. API Planning:

- *Detailed endpoints for features like product fetching, order creation, and shipment updates.*
- *Examples include:*
  - */products (GET): Fetch all products.*
  - */orders (POST): Record customer orders.*

### 4. Technical Documentation:

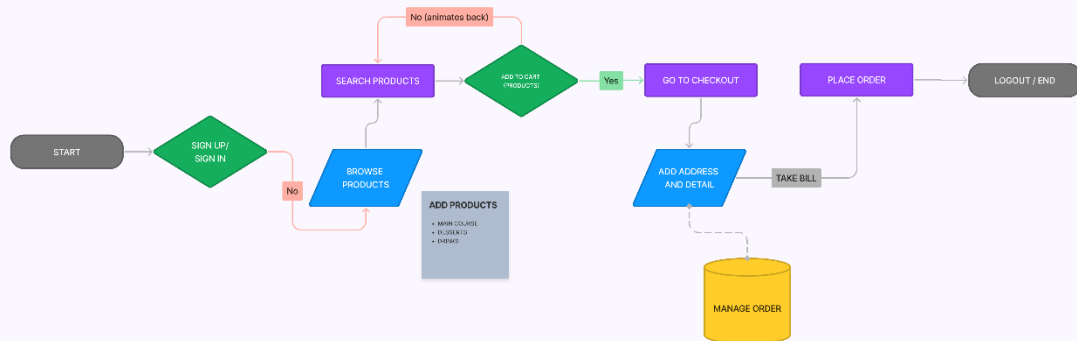

- *Comprehensive documentation of architecture, workflows, and APIs.*
- *Included diagrams, schema designs, and a technical roadmap for implementation.*

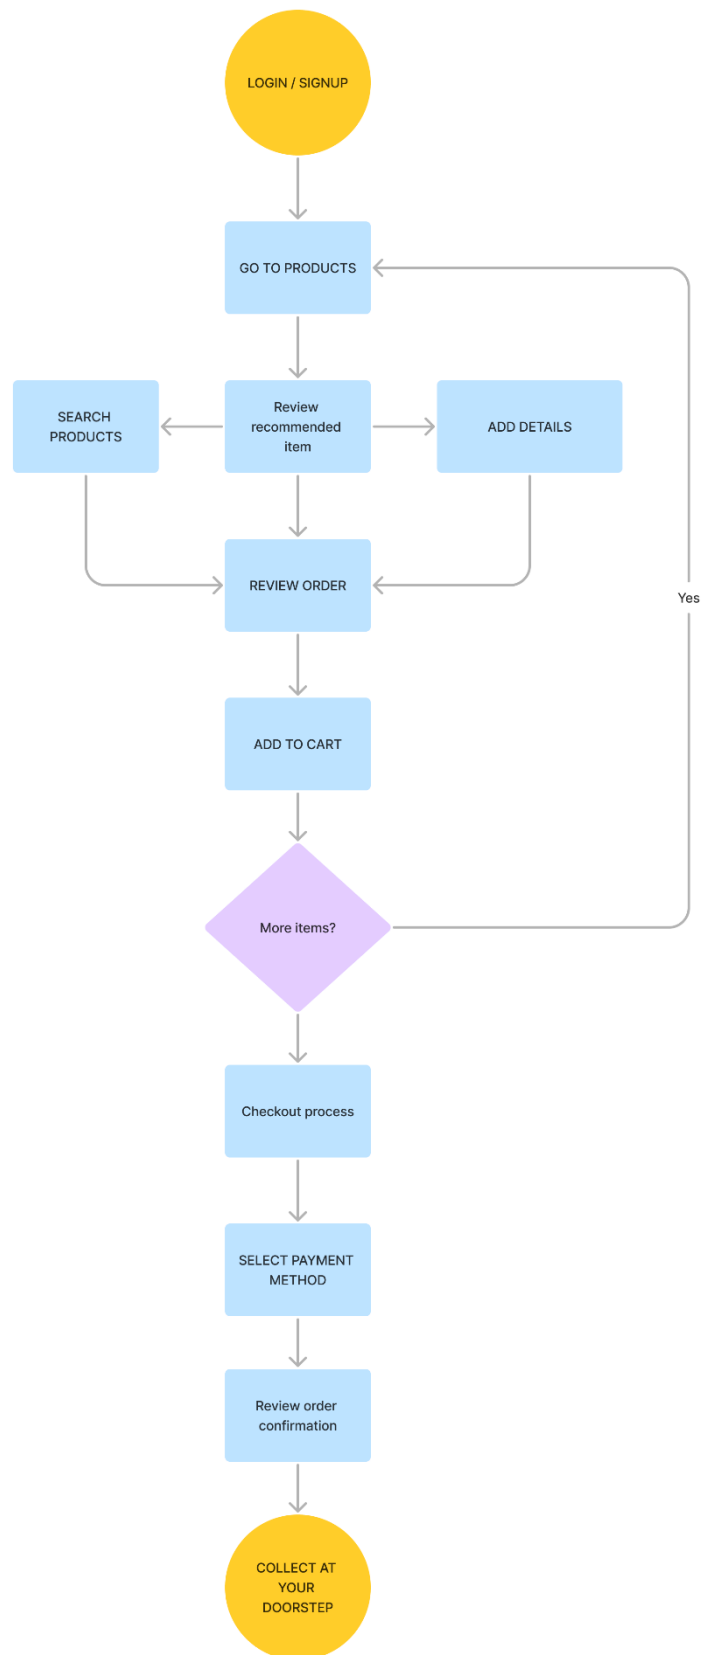

### 5. Collaboration and Feedback:

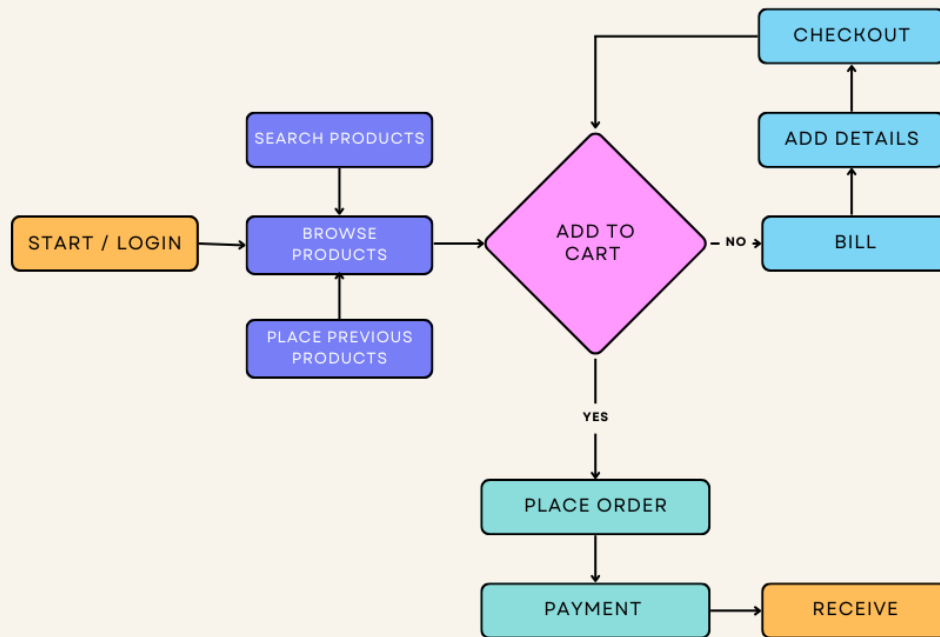

- *Peer reviews, brainstorming, and version control practices were emphasized to refine the plan.*
